

DATA SHEET

SIMPLE DISPENSER

REFERENCE FB1017

Simple Cook Water Dispenser, offers simplicity and economy being a type of water dispenser that uses gravity as a dosing system. Its design is technically and hygienically very complete. It admits the incorporation of the wooden support, available both for desktop and for floor, facilitating its use in every circumstance.

It is made of a single piece of **Prolipropylene (PP)** which makes it very robust and resistant, while allowing easy installation without the use of tools. Its system of insertion of the bottle is the same as that of our fountains with compressor, incorporates a spike that enters the PET bottle, using the cap of 5 gallons, and through which the water circulates through its pipe conduit until it is dosed by activating the faucet, made to avoid leaks.

This design ensures that the water never comes into contact with the outside of the container and is therefore free from the ingress and transmission of dirt.

SIMPLE DISPENSER
