

**MITA IoT**  
for remote management  
of the cooler

# Your cooler turns into a connected cooler.

## Remote monitoring.

The internet of things allows you to eliminate distances and intermediaries with real-time remote monitoring of each of your machines installed in the world.

## The history of the device in a single interface.

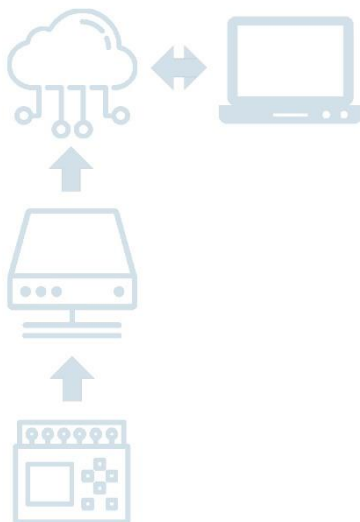

The life cycle of each cooler and of the entire fleet is traced on the basis of the real data of their use.

## Diagnostics and prevention.

Big data allows you to know the actual use and improve the distinctive performance of your already installed pieces of equipment and their future evolutions.

## MITA IoT 4.0 Technologies

## Internet of Things.

You can eliminate distances and intermediaries with real-time remote monitoring of each of your coolers installed in the world.

## Cloud Computing.

To monitor the history of the entire life cycle of each cooler and of all the fleet. This is possible thanks to real data of their use.

## Big Data/Analytics.

You know the current use and improve the distinctive performance of your installed machines as well as their future evolutions.
