

DATA SHEET

AUTOMATIC PUMP ADAPTER

REFERENCE AC1065

The **automatic water pump adapter** makes it suitable for water bottles with necks from 38mm to 48mm. This adapter allows the automatic pump to be used on typical supermarket water bottles between 3 and 10 litres.

It is designed in such a way that it fits perfectly on bottle necks between 38mm and 48mm without having to be only of these two measurements. It is suitable for all necks with sizes in this range.

It is very easy to use. It is inserted into the lower part of the automatic pump with the cannula already mounted. It is fixed in this position with the ring that rotates until it engages. Afterwards, the cannula is inserted into the bottle and the adaptor is coupled to the neck thanks to the internal system with adjustable rubber band, until it is perfectly coupled.

Specifications

Height	7.5 cm
External diameter	7,35 cm
Material	Polypropylene (PP)
Use	Bottles with neck from 38mm to 48mm
