

## DATA SHEET

# WATER PUMP 55mm

REFERENCE AC1043

**Manual Water Pump 55mm**, a very simple and economical way of dispensing natural water at room temperature.

It is very easy to use, you only have to press the pump to serve water. It includes a non-drip cap to prevent water spillage. It also includes a system that blocks its operation, just by turning the top of the pump it is blocked to avoid spilling water. Includes 3 attachable cannulas. These cannulas are each 18 centimetres long, so they can reach the bottom of the bottle without any problem. It can be adjusted to bottles from 11.8 to 20 litres, if they have a 55 millimetre neck, which gives it great versatility.

Both the cannulas and the water pump are made of Polypropylene (PP), a highly resistant material that is totally safe in contact with water and leaves no taste of plastic.

Each Manual Water Pump 55mm comes with a brush to thoroughly clean both the cannulas and the tap that serves the water.

This product is perfect to combine with our Stacker.
