

## DATA SHEET

# TOUCHLESS TAP

REFERENCE AC1045/AC1050/AC1057

**Touchless Tap** is a non-contact tap drive system. It is designed to keep both hand and cup away from the water dispenser and be more hygienic.

It is composed by **three reversible pieces**:

The **head** turns the tap without the need to touch it with the hand.

The **protector** protects the tap from sneezing and micro-drops.

The **fixer** separates the cup from the tap and keeps it at a safe distance.

As they are reversible, the same Touchless Tap kit can be used on both, the right and the left taps, as well as being able to put two Touchless Tap, one on each tap, simultaneously, as they do not disturb each other.

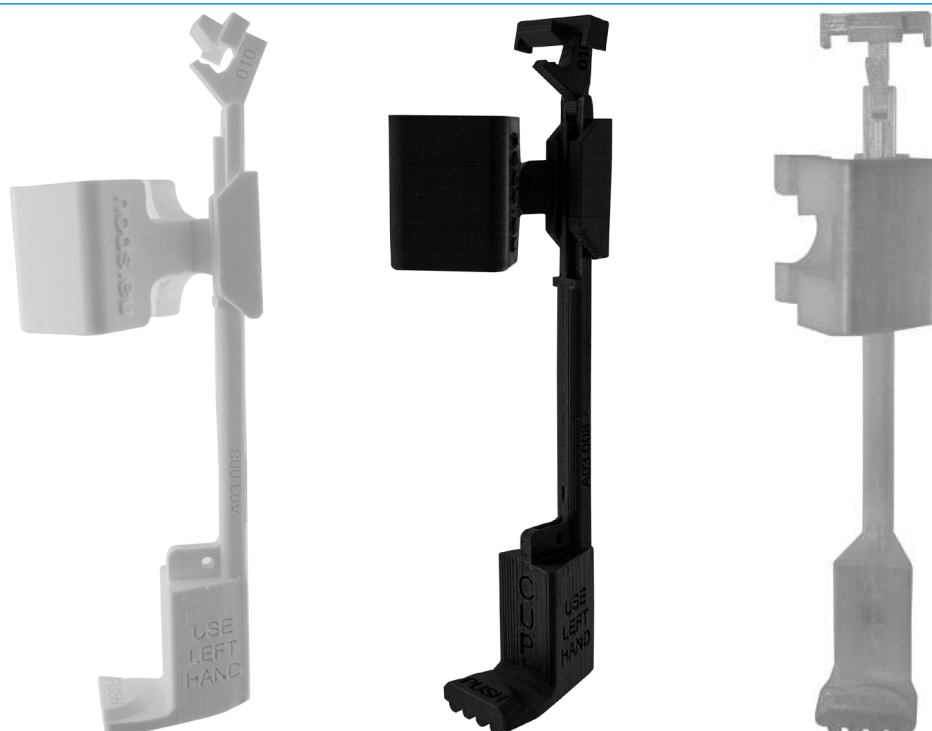

Touchless Tap ensures water dispensing in the most hygienic way. It is designed to **fix the cup** and do not touch the frontal of the watercooler or the tap. At the same time, the way that the cup is supported with one hand also guarantees that the hand does not touch the watercooler, the tap or even the Touchless Tap itself, as it simply pushes the cup on it. The system avoids any kind of transmission between the human and the dispenser, making it more hygienic and safe.

Only 20 cm of total height, it fits perfectly in the front panel of the watercooler. In addition, it fits and does not stick out, it integrates perfectly with the aesthetics of the watercooler. It adapts to dispensers they can adjust both male and female screw taps.

Available in **White (Ref. AC1045)**, **Black (Ref. AC1050)** and **Transparent (Ref. AC1057)**.

### Specifications

Weight	44.4 ± 2 gr
Height head + fixer	206 mm
Material	PETG
